Objectives

I'm a logistical engineer and enthusiastic programmer in my daily life. My interests includes web performance (backend), databases and data analysis. Now I'm focused on improving the quality of my code, so I'm looking for a remote team to work on a project in my area of interest. I am open to considering both commercial and open-source projects. I seek part-time intern vacancies for remote work.

Work Experience

Your company or product name could be here))	I havn't some experience in product development. Some of my pet-projects are listed below.
---	---

Projects

www.data-analyst.ru	Description: Internet site with registration form, logging users, dinamic parsing of page contents from markdown to html. The site contains solved assignments and educational projects of the Data Analyst course. Stack: vds, apache2, php, html, css Status: project is dead, but I continue technical use of the domain (see below)
www.data-analyst.ru:8888 www.data-analyst.ru/shell	Description: Remote online access to Jupyter Notebook and shell via Internet Stack: vds, apache2 (proxy), python, jupyter labs, shell, ssh Status: deployed
